

Experiment No 11: Configuration of Wi-Fi Hotspot and connect other devices (Mobile/laptop)

Connect the wifi access point to the PC through Ethernet port and supply the power

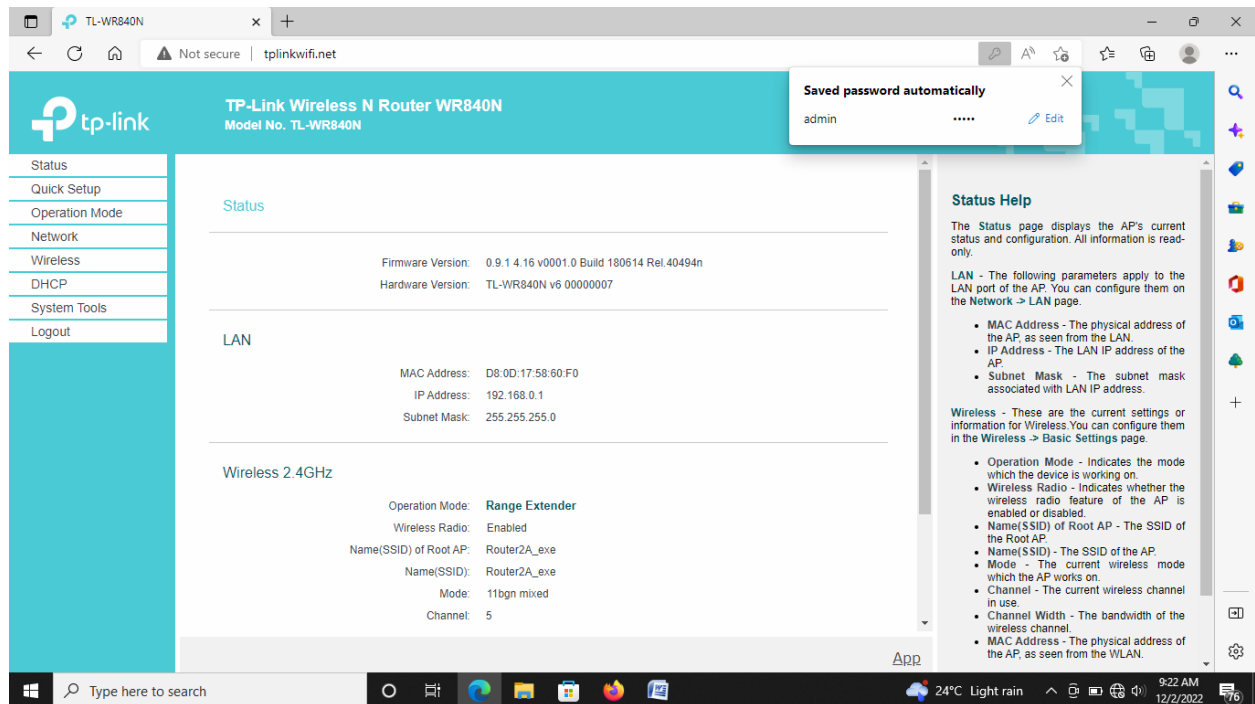

Go to the browser and type: the URL/IP address present on the back of the access point.

Example: <http://tplinkwifi.net/> OR default IP address present at the back of the ip address.

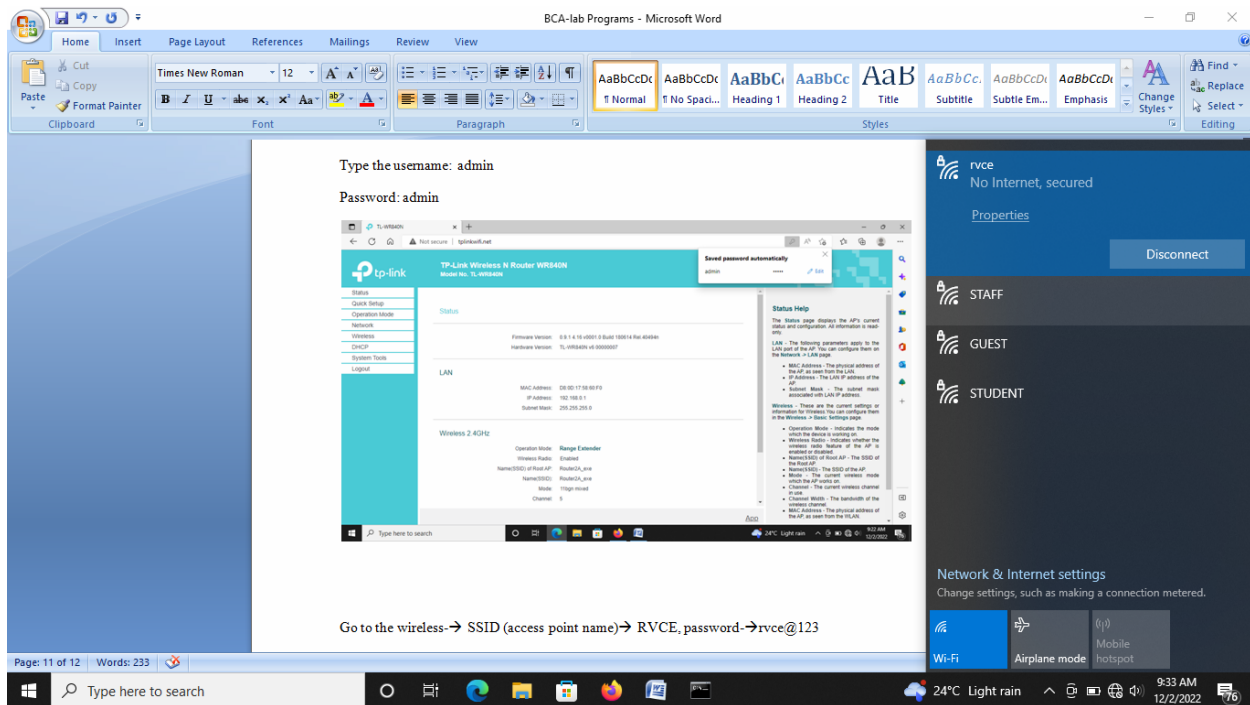

Type the username: admin

Password: admin

Go to the wireless→ SSID (access point name)→ rvce, password→rvce@123

Check the wifi connection in the mobile and PC then connect through the credentials

Rvce is listed
